

## Automated testing test

Create basic skeleton of automated test package that will include following scenarios:

- Sign-up on <https://dev.sendit.gl/sign-up/>
  - o Simulate invalid e-mail and check it
  - o Simulate short password error (less then 6 characters)
  - o Simulate correct sign-up
  - o Accept terms and conditions
  - o Sign out from application
- Login <https://dev.sendit.gl/login/>
  - o Simulate invalid e-mail
  - o Simulate short password error (less then 6 characters)
  - o Simulate valid login
- Test "Your profile" <https://dev.sendit.gl/app/user-settings/>
  - o Change Name, Job Title and Date Format

Test must run from CLI – the package will be executed with Chrome head-less browser on Ubuntu Server 16.04. (Keep in mind there is no x.org – desktop experience)
